

EXPERIMENT: WATER JUG PROBLEM

Aim

To write a Python program to solve the Water Jug Problem using Artificial Intelligence techniques.

Objective

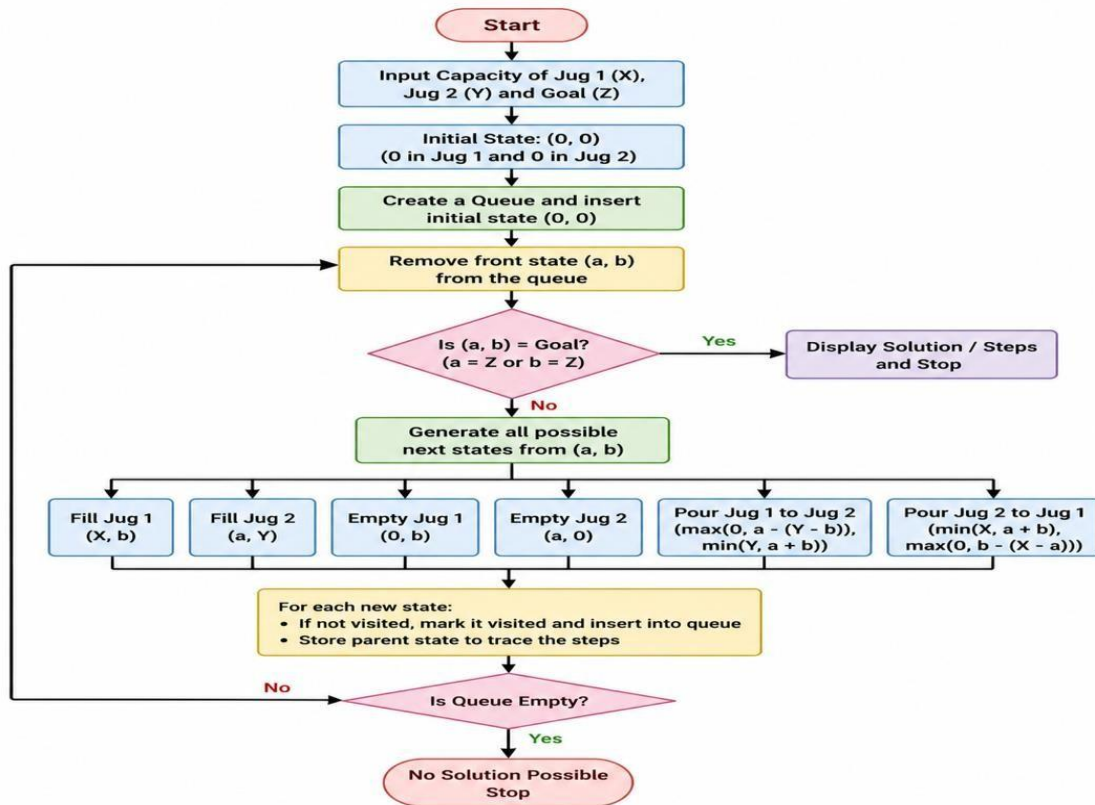

- To understand the state-space representation of AI problems.
- To implement a problem-solving technique for finding the solution to the Water Jug Problem.
- To learn how search algorithms can be used to reach a goal state.

Algorithm

1. Start.
2. Define the capacities of two water jugs.
3. Define the initial state and goal state.
4. Generate possible operations:
 - Fill a jug. ○ Empty a jug.
 - Pour water from one jug to another.
5. Check whether the generated state is valid.
6. Repeat the process until the goal state is reached.
7. Display the sequence of states.
8. Stop.

Flowchart:

EXPERIMENT 1: WATER JUG PROBLEM FLOWCHART

Code (Python)

```
from collections import
deque
def water_jug(jug1, jug2, target):
    visited = set()    queue =
deque([((0, 0), [])])
    while queue:
        (a, b), path = queue.popleft()
        if (a, b) in visited:
            continue
        visited.add((a, b))
        path = path + [(a, b)]
        if a == target or b == target:
            return path
    states = [
```

```

(jug1, b),    # Fill Jug 1
(a, jug2),    # Fill Jug 2
(0, b),       # Empty Jug 1
(a, 0),       # Empty Jug 2
(a-min(a, jug2-b), b+min(a, jug2-b)), # Pour A to B
(a+min(b, jug1-a), b-min(b, jug1-a)) # Pour B to A
]

for state in states:

if state not in visited:

    queue.append((state, path))

return None

jug1 = 4 jug2
= 3 target =2

solution = water_jug(jug1, jug2, target)

print("Solution Path:") for

step in solution:

    print(step)

```

Output

```

IDLE Shell 3.12.4
File Edit Shell Debug Options Window Help

Result

Thus, the Python program to solve the Water Jug Problem was executed successfully, and the required amount of water was obtained.

Conclusion

The experiment helped in understanding AI problem-solving methods and state-space search techniques. The Water Jug Problem was solved successfully using Python by exploring possible states and finding the goal state.
